Primary Listing:	Calculus II Tutorial	MATH 12560-22	SC	MATH	Main	1	

Question List

Reference #	Question
U1	Please comment on how well the activities, readings, lectures, and assignments helped you learn in this course.
U2	Please identify what you perceive to be the greatest strengths of this instructor's teaching.
U3	Please identify areas where this instructor could improve his/her teaching.

Student Responses

Reference #	Student #	Response
U1	1	The in class work helped me learn how to use the equations we learned.
U1	2	It was very helpful to go over the quizzes and worksheets as a class.
U1	3	Worksheets really helped enforce course material. Quizzes less so, but helped.
U1	4	The activities were very helpful.
U1	5	some tutorials were too long of a worksheet
U1	6	Adi's mini lectures before tutorial quizzes as well as his feedback throughout the worksheet work times, were very helpful.
U1	7	Tutorials helped provide a better understanding of the material that we learned throughout the class.
U1	10	The tutorial worksheets were pretty helpful in cementing what I'd learned that week. It was also great to have an opportunity to work in groups.
U1	12	Everything combined was good exposure to the material.
U1	13	The packets were helpful and the quizzes were a great practice for the exam.
U1	14	The quizzes were helpful, but the packets slightly long sometimes which meant that groups tended to split the work so that each student only did one problem in their area of expertise (thus perfecting their skills, and letting their weaknesses slip).
U1	15	all the lessons helped.
U1	16	The worksheets were valuable in reinforcing the information learned in the quizzes
U1	18	Worksheets were helpful in my learning
U1	19	Very well
U2	1	He is very organized and helpful.
U2	2	He carefully explains anything that I had questions with, and he was always available for questions and accommodating to his students.
U2	3	He's simply the best. I learn more in my tutorial than I do from the lectures. Well prepared and awesome at explaining any questions people have
U2	4	He makes sure we understand the information and he knows all of our names.
U2	5	Organized, interesting, concise, helpful, personable Very useful review before the quizzes
U2	6	Adi has a very clear, easy to follow teaching style that furthers my understanding of topics and teaches me how to solve various application problems. His enthusiasm of the course material adds to my enthusiasm for learning.
U2	7	Very good about taking the time to explain topics to confused students.
U2	8	Very good at summarizing the past week's lectures and answering questions about course material.
U2	9	Excellent TA, presented material much better than my professor. My first exam score was not great. After starting to attend his review sessions I turned my grade around. He explains concepts in just the right amount of detail that learning is enhanced but students do not get confused. I wish he could teach me math for the rest of my life.
U2	10	I thought it was helpful going through the past week's material before starting the quiz.
U2	11	A good job giving an overview of concepts each meeting of tutorial
U2	12	Great teaching ability.
U2	13	Great teacher. Really knows how to put the material in a way that we understood it. I learned more from the reviews before the quiz than the three days of class.

U2	14	Adi is a fantastic tutorial instructor, who genuinely cared that we understood how to use the tools we learned in lecture. This was appropriate for the class because the lectures had a tendency to focus on theory as opposed to application a little too much for my taste.
U2	15	Willing to help and was fair with grading
U2	16	Phenomenal in succinctly explaining what would otherwise be complex topics throughout the course. Very willing to help and provided options for office hours throughout the semester. Filled in gaps in my understanding that occurred occasionally in the class.
U2	17	Relatable
U2	18	Very good at explaining and making things clear before the quiz
U2	19	Quick and concise explanations helped consolidate everything I had learned up until that point.
U3	1	N/A
U3	2	I have no recommendations; he has done a fantastic job this semester with my tutorial class.
U3	3	Sometimes goes a little too into the math and theory behind it, but this isn't much of a weakness and is very interesting
U3	4	N/A, he's literally amazing.
U3	5	None
U3	6	I cannot name an area of improvement. Very good teaching.
U3	7	None- best calc tutorial instructor ever
U3	12	Time management
U3	13	Does not really need to improve.
U3	14	There's not really an area I could suggest for Adi to improve in other than teach more because his class always seemed to end too soon.
U3	15	When explaining a lesson speak up so people in the back can hear. sometimes I couldn't understand what you were saying.
U3	16	N/A
U3	19	Sometimes his amazing physique was distracting in class. German volume training did him well.
